Introducing the candidates that you've never heard of

BY STUART GRABAR

New York Times

There is a new global phenomenon that has a big impact in the future. Call it “the redistribution of the rest of the world.”

The United States is a single country. You’ve never heard of it. It’s the 195-country Paris Climate Accords, a trade deal with the world’s largest trading bloc, and the largest trade deal ever negotiated by the United States. It’s the TPP-11, the Trans-Pacific Partnership trade deal.

On May 30, a total of 11 countries – Chile and Peru, then Australia, New Zealand, Japan, South Korea, Canada, Mexico, Singapore, Malaysia, and Brunei – signed the so-called TPP-11, without the United States.

The agreement will include Japan, South Korea, Australia, New Zealand, Canada, Mexico, Singapore, Malaysia, and Brunei.

This includes almost 90% of the world’s population and has a combined GDP of $10 trillion.
