

Haiti: Cholera Cumulative Cases since 20 October 2010 (as of 29 Nov 2010)

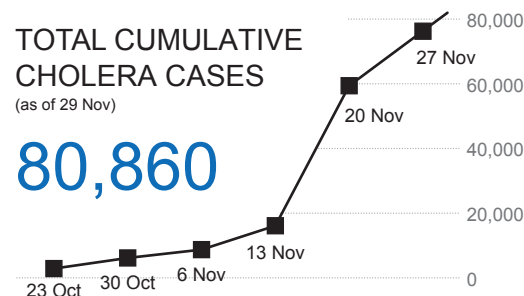

The World Health Organization has predicted that given the speed that cholera is spreading and the vulnerability of the population, especially in poor urban areas and isolated rural regions, up to 400,000 people could become infected, with half of the cases occurring in the first three months.

This scenario can be avoided if all sectors and health partners are able to step up their actions.

TOTAL CUMULATIVE CHOLERA CASES

(as of 29 Nov)

80,860

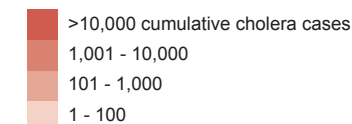

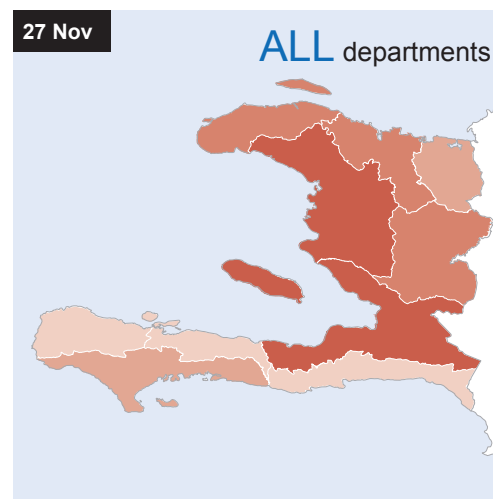

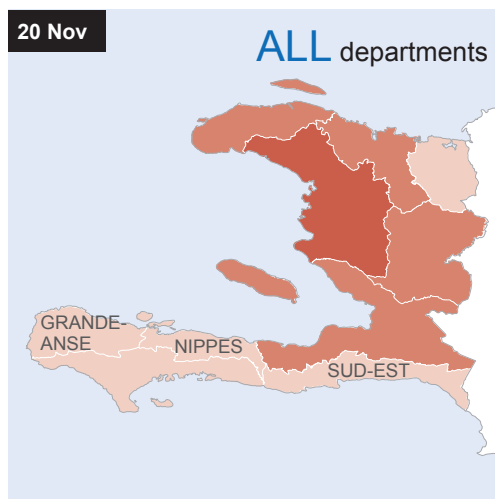

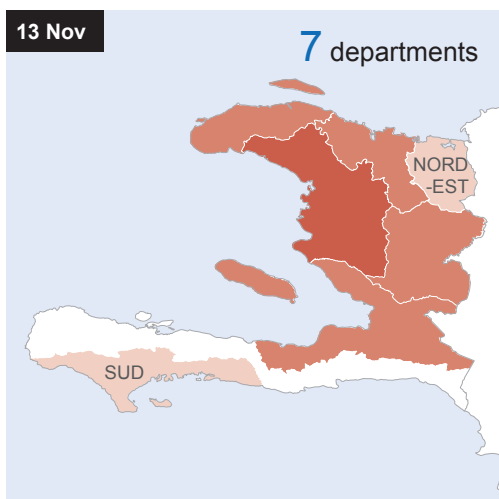

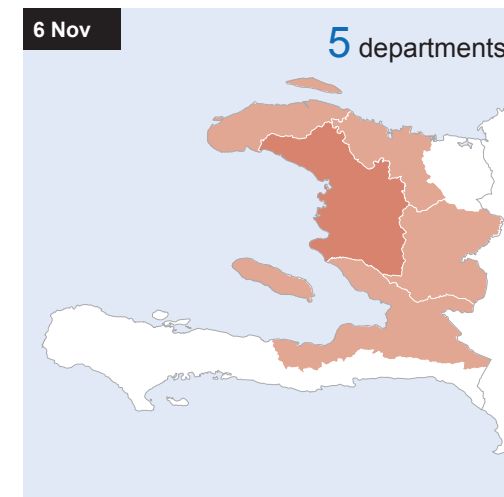

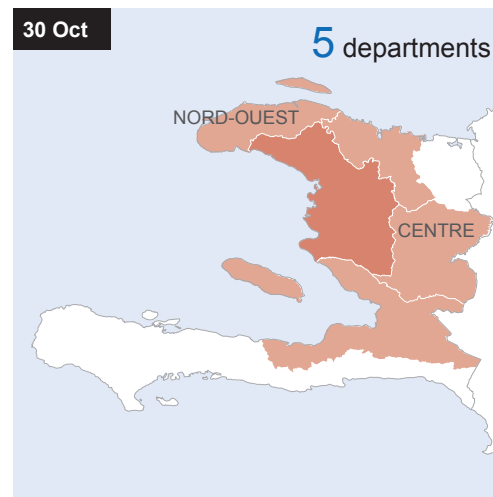

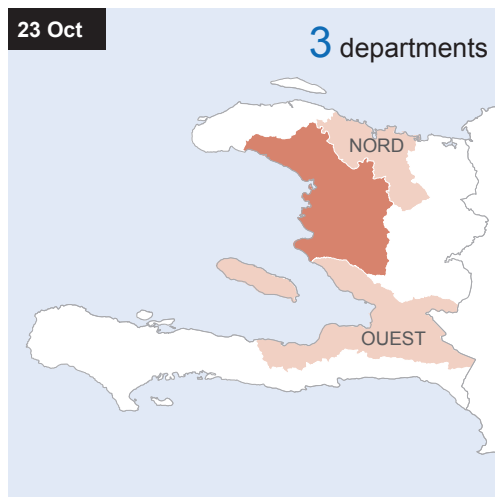

NUMBER OF DEATHS

1,817

MORTALITY

2.2%

Creation date: 1 Dec 2010

Glide number: EP-2010-000210-HTI
